

## Lucas Oil Products UK (GB)

### Part Number: 47068, 47069, 47070, 47071

Version No: 1.1 Safety data sheet according to REACH Regulation (EC) No 1907/2006, as amended by UK REACH Regulations SI 2019/758 Issue Date: **12/04/2024** Print Date: **12/04/2024** S.REACH.GB.EN

## SECTION 1 Identification of the substance / mixture and of the company / undertaking

#### 1.1. Product Identifier

| Product name                  | Lucas Oil Semi-Synthetic 10W-40 Engine Oil |
|-------------------------------|--|
| Chemical Name                 | Not Applicable                             |
| Synonyms                      | Mixture                                    |
| Chemical formula              | Not Applicable                             |
| Other means of identification | Not Available                              |

#### 1.2. Relevant identified uses of the substance or mixture and uses advised against

| Product Category Consumer | PC24 Lubricants, greases, release products       |
|---------------------------|--|
| Relevant identified uses  | Use according to manufacturer's directions.      |
| Uses advised against      | No specific uses advised against are identified. |

#### 1.3. Details of the manufacturer or supplier of the safety data sheet

| Registered company name | Lucas Oil Products UK (GB)  | Lucas Oil Products Europe Ltd            |
|-------------------------|---|--|
| Address                 | Unit 4 Cunliffe Drive Llangefni Industrial Estate LL77 7JA Llangefni<br>Great Britain | Block 3 Harcourt Centre Dublin 2 Ireland |
| Telephone               | +44 (0) 1248 723 666  | +44 344 225 5400                         |
| Fax                     | Not Available   | Not Available                            |
| Website                 | www.lucasoil.co.uk  | www.lucasoil.eu.com                      |
| Email                   | Info@LucasOil.co.uk   | info@lucasoil.eu.com                     |

#### 1.4. Emergency telephone number

| Association / Organisation        | Guy's & St Thomas' Poisons Unit Medical Toxicology Unit,<br>Guy's & St Thomas' Hospital Trust | ChemTel  |
|-----------------------------------|---|--|
| Emergency telephone<br>numbers    | 020 7188 7188   | 1-800-255-3924 (USA, Canada, Puerto Rico, US V.I.) |
| Other emergency telephone numbers | Not Available   | +1-813-248-0585 (International)                    |

### **SECTION 2 Hazards identification**

| 2.1. Classification of the substa  | ance or mixture  |
|--|--|
| Classified according to GB-<br>CLP Regulation, UK SI<br>2019/720 and UK SI<br>2020/1567 <sup>[1]</sup> | Not Applicable   |
|  |  |
| 2.2. Label elements  |  |
| Hazard pictogram(s)  | Not Applicable   |
| Signal word  | Not Applicable   |
| Hazard statement(s)  |  |
| Not Applicable   |  |
| Supplementary statement(s)   |  |
| EUH208   | Contains methyl-C20-24-alkylbenzenesulfonic acid, branched, calcium. May produce an allergic reaction. |

## Precautionary statement(s) Prevention

Not Applicable

Precautionary statement(s) Response

Not Applicable

## Precautionary statement(s) Storage

Not Applicable

#### Precautionary statement(s) Disposal

Not Applicable

Material contains lubricating oils, petroleum C20-50, hydrotreated neutral (DMSO <3% w/w by IP 346), paraffinic distillate, heavy, hydrotreated (severe) (DMSO <3% w/w by IP 346), paraffinic distillate, light, hydrotreated (severe) (DMSO <3% w/w by IP 346), paraffinic distillate, light, solvent-dewaxed (severe) (DMSO <3% w/w by IP 346).

### 2.3. Other hazards

Possible skin sensitizer\*.

| lubricating oils, petroleum<br>C20-50, hydrotreated neutral<br>(DMSO <3% w/w by IP 346) | Listed in the Europe Regulation (EC) No 1907/2006 - Annex XVII (Restrictions may apply)  |
|---|--|
| paraffinic distillate, heavy,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)      | Listed in the Europe Regulation (EC) No 1907/2006 - Annex XVII (Restrictions may apply)  |
| paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)      | Listed in the Europe Regulation (EC) No 1907/2006 - Annex XVII (Restrictions may apply)  |
| paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)   | Listed in the Europe Regulation (EC) No 1907/2006 - Annex XVII (Restrictions may apply)  |
| paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)   | Listed in the Europe Regulation (EC) No 1907/2006 - Annex XVII (Restrictions may apply)  |
| paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)   | Determined to have endocrine-disrupting properties according to Europe Regulation (EU) 528/2012, Europe Regulation (EU) 2017/2100, and Europe Regulation (EU) 2018/605 |

### **SECTION 3 Composition / information on ingredients**

#### 3.1.Substances

See 'Composition on ingredients' in Section 3.2

#### 3.2.Mixtures

### **SECTION 4 First aid measures**

| 4.1. Description of first aid mea | asures   |
|-----------------------------------|--|
| Eye Contact                       | <ul> <li>If this product comes in contact with eyes:</li> <li>Wash out immediately with water.</li> <li>If irritation continues, seek medical attention.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul> |
| Skin Contact                      | If skin contact occurs: <ul> <li>Immediately remove all contaminated clothing, including footwear.</li> <li>Flush skin and hair with running water (and soap if available).</li> <li>Seek medical attention in event of irritation.</li> </ul>                             |
| Inhalation                        | <ul> <li>If fumes, aerosols or combustion products are inhaled remove from contaminated area.</li> <li>Other measures are usually unnecessary.</li> </ul>  |
| Ingestion                         | <ul> <li>Immediately give a glass of water.</li> <li>First aid is not generally required. If in doubt, contact a Poisons Information Centre or a doctor.</li> </ul>  |

### 4.2 Most important symptoms and effects, both acute and delayed

See Section 11

#### 4.3. Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

#### **SECTION 5 Firefighting measures**

### 5.1. Extinguishing media

- Foam.
- Dry chemical powder.
- BCF (where regulations permit).
- Carbon dioxide.
- Water spray or fog Large fires only.

### 5.2. Special hazards arising from the substrate or mixture

Fire Incompatibility None known.

### 5.3. Advice for firefighters

| Fire Fighting         | <ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> <li>Use water delivered as a fine spray to control fire and cool adjacent area.</li> <li>Avoid spraying water onto liquid pools.</li> <li>DO NOT approach containers suspected to be hot.</li> <li>Cool fire exposed containers with water spray from a protected location.</li> <li>If safe to do so, remove containers from path of fire.</li> </ul> |
|-----------------------|---|
| Fire/Explosion Hazard | <ul> <li>Combustible.</li> <li>Slight fire hazard when exposed to heat or flame.</li> <li>Heating may cause expansion or decomposition leading to violent rupture of containers.</li> <li>On combustion, may emit irritating/ toxic fumes.</li> <li>May emit acrid smoke.</li> <li>Mists containing combustible materials may be explosive.</li> <li>May emit corrosive fumes.</li> </ul>   |

#### **SECTION 6 Accidental release measures**

## 6.1. Personal precautions, protective equipment and emergency procedures

See section 8

#### 6.2. Environmental precautions

See section 12

#### 6.3. Methods and material for containment and cleaning up

| Minor Spills | <ul> <li>Remove all ignition sources.</li> <li>Clean up all spills immediately.</li> <li>Avoid breathing vapours and contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> <li>Contain and absorb spill with sand, earth, inert material or vermiculite.</li> <li>Wipe up.</li> <li>Place in a suitable, labelled container for waste disposal.</li> </ul>  |
|--------------|---|
| Major Spills | <ul> <li>Clear area of personnel and move upwind.</li> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by all means available, spillage from entering drains or water courses.</li> <li>Consider evacuation (or protect in place).</li> <li>No smoking, naked lights or ignition sources.</li> <li>Increase ventilation.</li> <li>Stop leak if safe to do so.</li> <li>Water spray or fog may be used to disperse / absorb vapour.</li> </ul> |

| <ul> <li>Contain or absorb spill with sand, earth or vermiculite.</li> <li>Collect recoverable product into labelled containers for recycling.</li> <li>Collect solid residues and seal in labelled drums for disposal.</li> <li>Wash area and prevent runoff into drains.</li> <li>After clean up operations, decontaminate and launder all protective clothing and equipment before storing and re-using.</li> <li>If contamination of drains or waterways occurs, advise emergency services.</li> </ul> |
|--|
|--|

### 6.4. Reference to other sections

Personal Protective Equipment advice is contained in Section 8 of the SDS.

## SECTION 7 Handling and storage

| Safe handling                 | <ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>Prevent concentration in hollows and sumps.</li> <li>DO NOT enter confined spaces until atmosphere has been checked.</li> <li>Avoid smoking, naked lights or ignition sources.</li> <li>Avoid contact with incompatible materials.</li> <li>When handling, DO NOT eat, drink or smoke.</li> <li>Keep containers securely sealed when not in use.</li> <li>Avoid physical damage to containers.</li> <li>Always wash hands with soap and water after handling.</li> <li>Work clothes should be laundered separately.</li> <li>Use good occupational work practice.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> <li>Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions.</li> <li>DO NOT allow clothing wet with material to stay in contact with skin</li> </ul> |
|-------------------------------|--|
| Fire and explosion protection | See section 5  |
| Other information             | <ul> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>No smoking, naked lights or ignition sources.</li> <li>Store in a cool, dry, well-ventilated area.</li> <li>Store away from incompatible materials and foodstuff containers.</li> <li>Protect containers against physical damage and check regularly for leaks.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> </ul>   |

### 7.2. Conditions for safe storage, including any incompatibilities

| izi contantione for care storage   | c, moluany any moonpatibilities  |
|--|--|
| Suitable container   | <ul> <li>Metal can or drum</li> <li>Packaging as recommended by manufacturer.</li> <li>Check all containers are clearly labelled and free from leaks.</li> </ul> |
| Storage incompatibility  | None known   |
| Hazard categories in<br>accordance with Regulation<br>(EC) No 2012/18/EU (Seveso<br>III)                             | Not Available  |
| Qualifying quantity (tonnes)<br>of dangerous substances as<br>referred to in Article 3(10) for<br>the application of | Not Available  |

### 7.3. Specific end use(s)

See section 1.2

## SECTION 8 Exposure controls / personal protection

### 8.1. Control parameters

| Ingredient   | DNELs<br>Exposure Pattern Worker   | PNECs<br>Compartment  |

Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.

| 8.2. Exposure controls         Engineering controls are used to remove a hazard or place a brack control of engineering controls are used to remove a hazard or place a brack control of engineering controls are:         Process controls which involve changing the way a job activity Enclosure and/or isolation of emission source which keeps a strategically "adds" and "removes" air in the work environment design of a ventilation system must match the particular proceed Employers may need to use multiple types of controls to prever         • Employees exposed to confirmed human carcinogens should be fore engaging in of         • Work should be undertaken in an isolated system such as completion of the assigned task and before engaging in of         • Within regulated areas, the carcinogen should be stored in with any sample ports or openings closed while the carcine the operation.         • Each operation should be provided with continuous local of the operation.         • Exhaust air should not be discharged to regulated areas, in Clean make-up air should be introduced in sufficient volur         • For maintenance and decontamination activities, authorize clean, impervious garments, including gloves, boots and of employee should undergo decontamination and be required areas.  | barrier between the worker and the hazard. Well-designed engineering controls<br>be independent of worker interactions to provide this high level of protection.<br>/ or process is done to reduce the risk.<br>selected hazard "physically" away from the worker and ventilation that<br>t. Ventilation can remove or dilute an air contaminant if designed properly. #### **SECTION 11 Toxicological information**

## 11.1. Information on toxicological effects

| Inhaled  | The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting. |   |  |  |
|--|---|---|--|--|
| Ingestion  | The material has <b>NOT</b> been classified by EC Directives or other classification systems as "harmful by ingestion". This is because of the lack of corroborating animal or human evidence.  |   |  |  |
| Skin Contact   | The material is not thought to produce adverse health effects or skin irritation following contact (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable gloves be used in an occupational setting.             |   |  |  |
| Eye  | Although the liquid is not thought to be an irritant (as class<br>discomfort characterised by tearing or conjunctival redne   | ssified by EC Directives), direct contact with the eye may produce transient<br>ess (as with windburn).               |  |  |
| Chronic  | Skin contact with the material is more likely to cause a sensitisation reaction in some persons compared to the general population.<br>There is sufficient evidence to suggest that this material directly causes cancer in humans.   |   |  |  |

C20-50, hydrotreated neutral (DMSO <3% w/w by IP 346)

Acute toxicity: Animal testing showed high semilethal doses of >5000 mg/kg body weight and >2 g/kg body weight for exposure by swallowing or skin contact, respectively. The same material was also reported to be moderately irritating to skin, while not being sensitizing. Repeat dose toxicity: Animal testing showed that repeat dose toxicity was mild to moderate to the skin. Reproductive / developmental toxicity: No studies on developmental toxicity or reproduction are available. Animal testing shows that high doses may reduce the body weight of both the mother and the foetus, and increase the rate of soft tissue malformations. Genetic toxicity: These oils have been found to cause mutations.

## Lucas Oil Semi-Synthetic 10W-40 Engine Oil

|   | Cancer-causing potential: The general conclusion that can be drawn from animal testing is that these oils may potentially cause skin cancer; however, they have not been found to be associated with an increase in tumours elsewhere in the body.   |
|---|--|
| zinc bis(sec-butyl and 1,3-<br>dimethylbutyl)<br>dithiophosphate  | The material may produce severe irritation to the eye causing pronounced inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis. Dithiophosphate alkyl esters is corrosive and toxic to the tissues on skin or oral exposure depending on its concentration. Symptoms included diarrhoea, skin and gastrointestinal irritation, lethargy, reduced food intake, staining about the nose and eye; occasionally, there was drooping of the eyelid, hair standing up, inco-ordination and salivation. Toxicity is reduced following inhalation (due to vapour pressure and high viscosity). It may produce reproductive, developmental and genetic toxicity on experimental animals, but no substantive data is available to establish effect on humans.   |
| methyl-C20-24-<br>alkylbenzenesulfonic acid,<br>branched, calcium   | For alkaryl sulfonate petroleum additives:<br>Acute toxicity: Existing data indicates relatively low acute toxicity. Animal testing suggested diarrhea and reduced food intake, which is<br>consistent with the detergents in an oil-based vehicle having an irritating effect on the gastrointestinal tract.<br>Subchronic toxicity: Existing data suggests minimal toxicity after chronic exposure by mouth. Repeated skin contact and inhalation in<br>animals caused injury to the skin and the lungs, respectively.<br>Reproductive and Developmental Toxicity: Existing data did not show this group of substances to cause reproductive or developmental<br>toxicity. There was low concern for mutation-causing potential.<br>Linear alkyl benzene sulfonates are derived from strong corrosive acids. Animal testing has shown they can cause skin reactions, eye<br>irritation, sluggishness, passage of frequent watery stools, weakness and may lead to death. They may also react with surfaces of the mouth<br>and intestines, depending on the concentration exposed to. There is no evidence of harm to the unborn baby or tendency to cause cancer.   |
| paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)  | * Q8 MSDS  |
| paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)   | Animal studies indicate that normal, branched and cyclic paraffins are absorbed from the gastrointestinal tract and that the absorption of n-<br>paraffins is inversely proportional to the carbon chain length, with little absorption above C30. With respect to the carbon chain lengths likely<br>to be present in mineral oil, n-paraffins may be absorbed to a greater extent than iso- or cyclo-paraffins.<br>The major classes of hydrocarbons are well absorbed into the gastrointestinal tract in various species. In many cases, the hydrophobic<br>hydrocarbons are ingested in association with fats in the diet. Some hydrocarbons may appear unchanged as in the lipoprotein particles in<br>the gut lymph, but most hydrocarbons partly separate from fats and undergo metabolism in the gut cell. The gut cell may play a major role in<br>determining the proportion of hydrocarbon that becomes available to be deposited unchanged in peripheral tissues such as in the body fat<br>stores or the liver.   |
| Lucas Oil Semi-Synthetic<br>10W-40 Engine Oil & methyl-<br>C20-24-alkylbenzenesulfonic<br>acid, branched, calcium   | The following information refers to contact allergens as a group and may not be specific to this product.<br>Contact allergies quickly manifest themselves as contact eczema, more rarely as urticaria or Quincke's oedema. The pathogenesis of contact eczema involves a cell-mediated (T lymphocytes) immune reaction of the delayed type. Other allergic skin reactions, e.g. contact urticaria, involve antibody-mediated immune reactions. The significance of the contact allergen is not simply determined by its sensitisation potential: the distribution of the substance and the opportunities for contact with it are equally important. A weakly sensitising substance which is widely distributed can be a more important allergen than one with stronger sensitising potential with which few individuals come into contact. From a clinical point of view, substances are noteworthy if they produce an allergic test reaction in more than 1% of the persons tested.  |
| lubricating oils, petroleum<br>C20-50, hydrotreated neutral<br>(DMSO <3% w/w by IP 346) &<br>paraffinic distillate, heavy,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346) &<br>paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346) &<br>paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346) &<br>paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346) | The materials included in the Lubricating Base Oils category are related from both process and physical-chemical perspectives;<br>The potential toxicity of a specific distillate base oil is inversely related to the severity or extent of processing the oil has undergone, since:<br>• The adverse effects of these materials are associated with undesirable components, and<br>• The levels of the undesirable components are inversely related to the degree of processing;<br>• Distillate base oils receiving the same degree or extent of processing will have similar toxicities;<br>• The potential toxicity of residual base oils is independent of the degree of processing the oil receives.<br>• The reproductive and developmental toxicity of the distillate base oils is inversely related to the degree of processing.<br>Unrefined & mildly refined distillate base oils contain the highest levels of undesirable components, have the largest variation of hydrocarbon<br>molecules and have shown the highest potential cancer-causing and mutation-causing activities. Highly and severely refined distillate base<br>oils are produced from unrefined and mildly refined oils by removing or transforming undesirable components. In comparison to unrefined<br>and mildly refined base oils, the highly and severely refined distillate base oils have a smaller range of hydrocarbon molecules and have<br>demonstrated very low mammalian toxicity. Testing of residual oils for mutation-causing and cancer-causing potential has shown negative<br>results, supporting the belief that these materials lack biologically active components or the components are largely non-bioavailable due to<br>their molecular size.<br>Toxicity testing has consistently shown that lubricating base oils have low acute toxicities. Numerous tests have shown that a lubricating<br>base oil is mutagenic and carcinogenic potential correlates with its 3-7 ring polycyclic aromatic compound (PAC) content, and the level of<br>DMSO extractables (e.g. IP346 assay), both characteristics that are directly related to the degree/conditions of proce |
| zinc bis(sec-butyl and 1,3-<br>dimethylbutyl)<br>dithiophosphate & methyl-<br>C20-24-alkylbenzenesulfonic<br>acid, branched, calcium &<br>paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346) &<br>paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)   | No significant acute toxicological data identified in literature search.   |
| paraffinic distillate, heavy,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346) &<br>paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346) &<br>paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346) &<br>paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)  | For highly and severely refined distillate base oils:<br>In animal studies, the acute, oral, semilethal dose is >5g/kg body weight and the semilethal dose by skin contact is >2g/kg body weight. The<br>semilethal concentration for inhalation is 2.18 to >4 mg/L. The materials have varied from "non-irritating" to "moderately irritating" when<br>tested for skin and eye irritation. Testing for sensitisation has been negative. The effects of repeated exposure vary by species; in animals,<br>effects to the testes and lung have been observed, as well as the formation of granulomas. In animals, these substances have not been<br>found to cause reproductive toxicity or significant increases in birth defects. They are also not considered to cause cancer, mutations or<br>chromosome aberrations.<br>The substance is classified by IARC as Group 3:<br><b>NOT</b> classifiable as to its carcinogenicity to humans.<br>Evidence of carcinogenicity may be inadequate or limited in animal testing.   |

#### 11.2 Information on other hazards

### 11.2.1. Endocrine disrupting properties

Many chemicals may mimic or interfere with the body s hormones, known as the endocrine system. Endocrine disruptors are chemicals that can interfere with endocrine (or hormonal) systems.

Endocrine disruptors interfere with the synthesis, secretion, transport, binding, action, or elimination of natural hormones in the body. Any system in the body controlled by hormones can be derailed by hormone disruptors. Specifically, endocrine disruptors may be associated with the development of learning disabilities, deformations of the body various cancers and sexual development problems.

Endocrine disrupting chemicals cause adverse effects in animals. But limited scientific information exists on potential health problems in humans. Because people are typically exposed to multiple endocrine disruptors at the same time, assessing public health effects is difficult.

#### 11.2.2. Other information

#### 12.6. Endocrine disrupting properties

The evidence linking adverse effects to endocrine disruptors is more compelling in the environment than it is in humans. Endocrine distruptors profoundly alter reproductive physiology of ecosystems and ultimately impact entire populations. Some endocrine-disrupting chemicals are slow to break-down in the environment. That characteristic makes them potentially hazardous over long periods of time. Some well established adverse effects of endocrine disruptors in various wildlife species include; eggshell-thinning, displayed of characteristics of the opposite sex and impaired reproductive development. Other adverse changes in wildlife species that have been suggested, but not proven include; reproductive abnormalities, immune dysfunction and skeletal deformaties.

#### 12.7. Other adverse effects

No evidence of ozone depleting properties were found in the current literature.

No Data available for all ingredients

#### **SECTION 13 Disposal considerations**

### 13.1. Waste treatment methods

| 15.1. waste treatment methous |   |
|-------------------------------|---|
| Product / Packaging disposal  | <ul> <li>Containers may still present a chemical hazard/ danger when empty.</li> <li>Return to supplier for reuse/ recycling if possible.</li> <li>Otherwise: <ul> <li>If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.</li> <li>Where possible retain label warnings and SDS and observe all notices pertaining to the product.</li> <li>Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked.</li> <li>A Hierarchy of Controls seems to be common - the user should investigate: <ul> <li>Reduction</li> <li>Recycling</li> <li>Disposal (if all else fails)</li> </ul> </li> <li>This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use. If it has been contaminated, it may be possible to reclaim the product by filtration, distillation or some other means. Shelf life considerations should also be applied in making decisions of this type. Note that properties of a material may change in use, and recycling or reuse may not always be appropriate.</li> <li>DO NOT allow wash water from cleaning or process equipment to enter drains.</li> <li>It may be necessary to collect all wash water for treatment before disposal.</li> <li>In all cases disposal to sever may be subject to local laws and regulations and these should be considered first.</li> <li>Where in doubt contact the responsible authority.</li> <li>Recycle wherever possible or consult manufacturer for recycling options.</li> <li>Consult State Land Waste Management Authority for disposal.</li> <li>Bury residue in an authorised landfill.</li> </ul> </li> <li>Recycle containers if possible, or dispose of in an authorised landfill.</li> </ul> |

#### Not Applicable

#### 14.7.2. Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

| Product name   | Group         |
|--|---------------|
| lubricating oils, petroleum C20-<br>50, hydrotreated neutral<br>(DMSO <3% w/w by IP 346) | Not Available |
| zinc bis(sec-butyl and 1,3-<br>dimethylbutyl) dithiophosphate                            | Not Available |
| methyl-C20-24-<br>alkylbenzenesulfonic acid,<br>branched, calcium                        | Not Available |
| paraffinic distillate, heavy,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)       | Not Available |
| paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)       | Not Available |
| paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)    | Not Available |
| paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)    | Not Available |

#### 14.7.3. Transport in bulk in accordance with the IGC Code

| Product name   | Ship Type     |
|--|---------------|
| lubricating oils, petroleum C20-<br>50, hydrotreated neutral<br>(DMSO <3% w/w by IP 346) | Not Available |
| zinc bis(sec-butyl and 1,3-<br>dimethylbutyl) dithiophosphate                            | Not Available |
| methyl-C20-24-<br>alkylbenzenesulfonic acid,<br>branched, calcium                        | Not Available |
| paraffinic distillate, heavy,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)       | Not Available |
| paraffinic distillate, light,<br>hydrotreated (severe) (DMSO<br><3% w/w by IP 346)       | Not Available |
| paraffinic distillate, light,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)    | Not Available |
| paraffinic distillate, heavy,<br>solvent-dewaxed (severe)<br>(DMSO <3% w/w by IP 346)    | Not Available |

## **SECTION 15 Regulatory information**

#### 15.1. Safety, health and environmental regulations / legislation specific for the substance or mixture

#### | lubricating oils, petroleum C20-50, hydrotreated neutral (DMSO <3% w/w by IP 346) is found on the following regulatory lists

Chemical Footprint Project - Chemicals of High Concern List

Great Britain GB mandatory classification and labelling list (GB MCL)

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Group 1: Carcinogenic to humans International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic

#### zinc bis(sec-butyl and 1,3-dimethylbutyl) dithiophosphate is found on the following regulatory lists

International WHO List of Proposed Occupational Exposure Limit (OEL) Values for Manufactured Nanomaterials (MNMS)

### methyl-C20-24-alkylbenzenesulfonic acid, branched, calcium is found on the following regulatory lists Not Applicable

#### paraffinic distillate, heavy, hydrotreated (severe) (DMSO <3% w/w by IP 346) is found on the following regulatory lists

Chemical Footprint Project - Chemicals of High Concern List

Great Britain GB mandatory classification and labelling list (GB MCL)

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic

## paraffinic distillate, light, hydrotreated (severe) (DMSO <3% w/w by IP 346) is found on the following regulatory lists

Chemical Footprint Project - Chemicals of High Concern List

Great Britain GB mandatory classification and labelling list (GB MCL)

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic

paraffinic distillate, light, solvent-dewaxed (severe) (DMSO <3% w/w by IP 346) is found on the following regulatory lists

| Chemical Footprint Project - Chemicals of High Concern List  |                               |
|--|-------------------------------|
| Great Britain GB mandatory classification and labelling list (GB MCL)                              |                               |
| International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - No | ot Classified as Carcinogenic |
| paraffinic distillate, heavy, solvent-dewaxed (severe) (DMSO <3% w/w by IP 346) is found on the    | e following regulatory lists  |
| Chemical Footprint Project - Chemicals of High Concern List  |                               |
| Great Britain GB mandatory classification and labelling list (GB MCI.)                             |                               |

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs - Not Classified as Carcinogenic

## Additional Regulatory Information

#### Not Applicable

This safety data sheet is in compliance with the following EU legislation and its adaptations - as far as applicable - : Directives 98/24/EC, - 92/85/EEC, - 94/33/EC, - 2008/98/EC, - 2010/75/EU; Commission Regulation (EU) 2020/878; Regulation (EC) No 1272/2008 as updated through ATPs.

#### Information according to 2012/18/EU (Seveso III):

| -               |               |
|-----------------|---------------|
| Seveso Category | Not Available |

#### 15.2. Chemical safety assessment

No Chemical Safety Assessment has been carried out for this substance/mixture by the supplier.

### National Inventory Status

| Legend:   | Yes = All CAS declared ingredients are on the inventory<br>No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration.  |

#### **SECTION 16 Other information**

| Revision Date | 12/04/2024 |
|---------------|------------|
| Initial Date  | 12/04/2024 |

#### Full text Risk and Hazard codes

| H304 | May be fatal if swallowed and enters airways.    |
|------|--|
| H317 | May cause an allergic skin reaction.             |
| H411 | Toxic to aquatic life with long lasting effects. |

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

For detailed advice on Personal Protective Equipment, refer to the following EU CEN Standards:

EN 166 Personal eye-protection

EN 340 Protective clothing

EN 374 Protective gloves against chemicals and micro-organisms

EN 13832 Footwear protecting against chemicals

#### EN 133 Respiratory protective devices
